

NORILSK NICKEL HARJAVALTA COBALT SULPHATE

Norilsk Nickel Harjavalta Oy Finland

Typical Chemical Composition (%) COBALT SULPHATE

Co	21,06
Ni	0,0030
Fe	0,0002
Mg	0,0003
Na	0,0004
Al, As, Ca, Cd, Cr, Cu, K, Mn, P, Pb, Sb, Se, Si, Zn	< 0,0001
instH2O	0,0002
TOC	0,0001

Applications

- Electroplating
- Electrogalvanizing
- Powder metallurgy
- Ceramics
- Catalysts

Packing

20 kg bags on wooden pallet
= 960 kg

500 kg big bags on wooden
pallet

1000 kg big bags on wood-
en pallet

Product description

Norilsk Nickel Cobalt sulphate is made from the material that is separated from Company's primary Nickel raw material feed.

Cobalt sulphate is characterized by its high quality and consistent quality. It has low metallic impurities as well as low organic impurities.

Controlled particle size improves its free-flowing characteristics.

Norilsk Nickel Cobalt sulphate is mainly used for rechargeable battery applications.

Cobalt Sulphate production is in compliance with ISO 9001:2015, ISO 14001:2015, ISO 45001:2018.

One of the lowest carbon footprint in the industry.
